

My letter to Mrs.Petro

Dear Mrs.Petro,

Life in 2020 has been rough, between this global pandemic, the fight for women's rights, and racial equality it's easy to let this year bring you down. Your story has inspired me to make things better, here's how. In 1981 you graduated with a Bachelor of Science in engineering. Being a woman in stem is a great accomplishment for gender equality it shows that women can be just as smart as men and as capable to chase a career in those areas, which is something that is not easy to do. My goal to make things better is by encouraging young girls to get a good education and remind them that through the value of hard work they can be anything they want to be regardless of how others view their gender, race, or sexual orientation. According to your biography you are the deputy director of NASA'S John F Kennedy Space Center. When women get into high positions of power in the workforce it pushes back gender norms that women are too "emotional" to be in high positions at work. More women should be encouraged and expected to go the extra mile and make amazing accomplishments and do great things in their lives without being overly critized due to stereotypes surrounding women. Your ability to establish and sustain KSC as the world's preeminent multiuser launch complex directly supports Florida and the nation's leadership in the space community. In conclusion, due to women like you, young girls everywhere are encouraged to take the extra step and strive to do great things in their lives and inspire others to do the same.

Sincerely,
Someone who is inspired by you
